Three Shires Hospital

Peter Dann have been involved with the ongoing phased upgrade of this BMI Hospital in Northampton. Sited in the picturesque grounds of the St. Andrews Hospital, the building consists of several different forms of construction, although the exterior is consistent.

We were involved in the provision of an extension to the canteen, and a new servery. The structure was in the form of load bearing masonry walls with precast floors on mini piled foundations.

There were certain challenges, that were overcome with the building work having to be carried out on an operational hospital site.

Further developments to the hospital are on the drawing board. These include the introduction of a CT Scanner with associated layout modifications, comprising of a new waiting area and entrance structure.
